

Delivery instruction

Transport

The consignment must be systematically protected during transport to and at the site against external factors, see “Storage”.

In the event of a non-conformity delivery, this must be signed on the delivery note.

Delivery

As soon as the buyer has received the consignment, the buyer shall perform the necessary inspection to establish whether the consignment complies with what was agreed, according to the Sales and delivery terms for A/S HAI Horsens.

The inspections must be assessed in accordance to the newest edition of DIN 17611, on a cleaned consignment and in the shade in daylight.

Storage

The delivered consignment must at all-time be stored and protected from external factors like moisture, heat (for example due to direct sunlight), pressure and dents, soil and dust including, without limitation, lime and cement. If protection foil is used, this has to be removed as fast as possible due to residuals.

It is recommended to remove the packaging after delivery and to ensure good ventilation. The use of ventilated tarpaulin is recommended for longer interim storage before further processing.

Installation and after first time use

When installing and fitting the consignment, it must be protected from damage.

If products do not fulfill the necessary inspection according “Delivery” these must not be installed. Consequently, installed non-conformity products does not give cause for replacement of the elements.

The precondition for any guarantee is that the customer and the client follow the treatment and maintenance regulations. This also includes professional final cleaning and periodic maintenance cleaning, depending on the atmospheric load. For further instruction, please refer to the document “Cleaning and maintenance”.

Do not hesitate to contact us if you have any questions.

This note is a supplement to the terms of sale and delivery which always apply
